

Gehry Harbour - Green Urban Development

The Gehry Harbour project is an important showcase for ProjectZero as ZERO+ energy design ambitions go hand in hand with world class architect Frank Gehry and his masterplan making this a world class showcase with multiple dimensions.

ProjectZero and its energy consultants have supported the Gehry Harbour Project and the Gehry Company to achieve its ZERO+ energy goals. The ambition will be achieved in combination of energy efficient constructions and renewable energy supply from local PV, green district heating and local wind turbines.

About Sønderborg's Gehry Harbour Project

The harbor project was started in November 2006 by Sønderborg Municipality and Bitten & Mads Clausens Foundation. The vision is to help the city's harbour contribute to the vitality of Sønderborg, making it a high-quality and attractive city for residents and visitors.

The ambition is to create a sustainable area which is unique in Denmark and Europe. An area characterized by outstanding architecture high-quality buildings and numerous activities. The aim is to make the area attractive to its residents, newcomers and visitors.

In 2007, the world-famous architect Frank Gehry was hired to design the Masterplan to transform the old industrial waterfront of Sønderborg harbor into a vibrant area.

The GEHRY Masterplan was presented in October 2008. It is a three-dimensional model – a form study – which sets the overall architectural tone and outlines the vision and dimensions for the entire area. The Masterplan encompasses buildings with a total floor space of approximately 52,000 square meters. Transformation of the harbour area started in 2011 and will proceed over a number of years involving developers and architects working on the specific buildings and outdoor areas.

By 2014 two major building constructions have been completed and more buildings are in process.
